S28 Geotourism

Conveners: [Geiza Timčák](#) (SK), [Jana Jablonska](#) (SK) & [Tadeusz Slomka](#) (PL)

This session accepts both full papers and abstracts

Geotourism has many aspects. One area that attracts the interest of specialists and lay people is the scenic and other generally appreciable aspects of the geological structure that underlies the vegetation or is exposed due to various types of erosion, tectonic or volcanic activities as well as the results of activities of water (flowing or still). The other aspect is the results of special anthropogenic activities working on rock (rock carving, carving of dwellings into rocks, monuments carved out of in situ rocks, rocks containing palaeontological material), rocks in civil engineering, decommissioned mines.
